How To Make LED Light Bulbs

A DIY Guide to Homemade LED Lighting

With plans, ideas and photos to help you make your own LED light bulbs on a budget. Save energy and money by making your own LED lamps.

Another Do It Yourself Book
from The DIY World
<http://www.thediyworld.com>

Synopsis

How to make your own LED light bulbs and save money and energy. You can make your own LED light bulb at home and save on the cost of retail LED lamps. LED lighting is still a bit expensive, but that should not stop you from using LEDs to save energy at home. This booklet is an original from The Do It Yourself World with full color images and detailed plans. Includes tips and tricks for making a better LED lamp yourself. The book is actually two books in one. The first section deals with LED facts in general. The second section (book one) deals with how to make a 120 Volt LED light bulb for your home. The third section (book two) deals with how to make a 12 Volt LED light bulb for your RV, camper or boat. The LED light bulbs in these two books show you how to make a more efficient light bulb by avoiding the use of resistors. Resistors resist electricity, wasting the extra energy as heat. In an off grid living environment, wasting energy is undesirable. By making your LED light bulb without resistors or power converters, you are using all of your valuable energy.

Customer Reviews

This is basically the same information as on the website. The book assumes some knowledge, which is odd because it starts telling you each step to take then as you move through the process of

building the light it begins giving steps that only a person familiar with electricity would understand (as they are given.) The book is short and offers no information that is not easily available for free on the internet.

Poorly formatted, hard to follow, and a duplicate of a lot of information available on the web. I thought this would be a fun project but it's really just a guide on connecting LEDs in a series. There are few considerations taken to this being a practical source of light, the quality of the light, or to safety. Ultimately this is not a usable guide for doing anything but building the most basic of light sources, and even for that I'd like to see more information.

Missing a whole lot of information. No information about making your own replacement fluorescent lamps. I'm sure the information in this mini pamphlet is covered in basic electricity 101. Should be free. On a positive, you can make your calculations using basic arithmetic.

WORST book ever. Don't even waste your time. All the info is found free online and you can see way better tutorials on youtube...

PLEASE don't waste your money on this silly book.

I'm cheap, this book is cheap, the taught product is cheap, unless you are a millionaire (or think you are), this is a good way to save and work a hobby at the same time. i.e. cheap is good. LEDs are the next best brain child and this book shows a couple great starting places, 12v & 110v light sources that for now are too costly for me to replace. Besides, I am learning some great stuff.

This guy is a scammer[...]
